

Leading Information and Communication Organization to Distribute TeleSpectra BroadNet Services

Scottsdale, AZ August 19, 2004-- TeleSpectra, LLC a Network Service company in the rural Southwest, today announced that Information and Communication Systems (ICS), an IT outsource and technology solutions provider, entered into an agreement that allows ICS to provide TeleSpectra's BroadNet High-Speed Internet services to their clients in the greater Scottsdale market.

TeleSpectra's BroadNet service is an always-on connection to the Internet designed for residential and business subscribers seeking very high speed and reliability. Typically, broadband is defined as delivering bandwidth of at least 256kbps, or about 6 times the speed of dial-up connections. This always-on technology allows users to work much faster and more efficiently than ever before, while delivering the kind of access to critical information that dial-up just can't provide. BroadNet services are carried on TeleSpectra's backbone network to the TeleSpectra Internet gateway bypassing the Public network and archaic local telephone loop.

Information and Communication Systems (ICS), a company that designs, develops implements and supports information systems, e-Commerce solutions, databases, web sites and custom software, based in Scottsdale, AZ, has a dedicated team of practiced communication specialists to provide consulting, sales, marketing, implementation and support for the BroadNet service. ICS also has alliances with other leading communication product manufacturers and service providers in order to service and support technologies that help organizations gain cost effective efficiencies in their business processes. "BroadNet is our new wireless high-speed internet service of choice," said Robert DelGarbino, Vice President of Operation for ICS. "With the investments we have made into becoming a partner of TeleSpectra as a value-added reseller of the BroadNet service, ICS is poised to support major opportunities in the enterprise market well into the future. We've already signed three new customers to the BroadNet program and our relationship is only just beginning."

Michael McHale, CEO for TeleSpectra, LLC stated "ICS saw major opportunities for the BroadNet service in SOHO and vertical markets," He continued, "We are delighted that we have established a strong working relationship with ICS. Broadband services help growing companies become more competitive and more efficient and allow residential subscribers to use the internet at incredible speed. Our relationship with ICS will extend our reach to an even great number of prospects."

ABOUT TELESPECTRA

TeleSpectra, LLC is a leading provider of telecommunications and broadband services to rural communities in the Southwestern United States. TeleSpectra is an Arizona based company specializing in the design, engineering, construction, installation and operation of Broadband transport and access networks in the rural Southwest. TeleSpectra is the proud recipient of the Innovator of the Year Award -- Service Company: presented by Governor Janet Napolitano, Arizona Department of Commerce, the Arizona Technology Council, the High Technology Industry Cluster, and the Southern Arizona Tech Council. The award recognizes the technological and business achievements of Arizona's top companies, organizations and individuals. Although TeleSpectra was originally formed in 1999, it is comprised of merged and acquired assets from companies such as MCI/American Television Relay, who have been operating in the Southwest for nearly 50 years. The Company's mission is to provide reliable and scalable network services for business, medical, educational and government entities throughout the rural southwest via DS1, DS3 and OC3 connectivity.
