Managed Network Services

Managed Network Services are a combination of trained engineers and automated tools that continuously monitor, alert and repair computer and network systems. Managed network services can significantly reduce your risk of system downtime which can translate to a healthier bottom line.

Why managed network services?
- You want to run your business without computer interruptions.
- You know that when your workers stop so does your cash flow.
- Automating IT functions add dollars to the bottom line.

This chart shows the length of time your network (business continuity) is at risk for various types of preventative and automated IT services.

Business Continuity Risk Chart

	Week 1	Week 2	Week 3	Week 4
No Maintenance	Always at risk			
Monthly Maintenance	27 days at risk			
Biweekly Maintenance	13 days at risk		13 days at risk	
Weekly Maintenance	risk	risk	risk	risk
Managed ICS	Covered			

- ■ At Risk
- ■ Minimal Risk

ICS provides managed network services with managed-ICS. Managed-ICS monitors your computers and network 24/7. We alert you to problems and potential issues. **You choose to make corrections yourself or have ICS make corrections for you.** We also provide you with reports that summarize your networks health and activity. Managed-ICS allows you and your staff to stay focused on business initiatives instead of computer problems.

**Minimize your business continuity risk with Managed-ICS.
